

Spring time, it'll be here soon! Time to get your yard looking fresh again! Lawn Aeration is an essential practice that allows your lawn to rejuvenate and heal from excessive drought and foot traffic while promoting healthy soil quality and thatch decomposition.

Green Machine Lawn's aeration service breaks up the interface, or overlap of different soil types or sod, and promotes positive conditions for turfgrass growth and development. The process helps air and water penetrate deep into the soil, which encourages deeper root growth and better turf quality. This aeration provides a much healthier and vibrant lawn and landscape as a whole.
