

A well placed and well designed retaining wall will hold back soil and rocks, protecting your landscape from erosion and runoff. Green Machine Lawns, has special experience designing and installing retaining walls. Using a variety of materials, we can create a beautiful and functional retaining wall to fit your style and budget.

- Block Retaining Walls
- Concrete Retaining Walls
- Curved Retaining Walls
- Seating or sitting Walls
- Stacked Stone Retaining Walls
- Landscape Tiered Retaining Walls

Why Install a Retaining Wall?

There are many reasons to install a retaining wall, including:

- Preventing erosion: retaining walls are designed to support changes in elevation on your property and to prevent soil from slipping.
- Landscape stability: sometimes builders and landscapers will use retaining walls to help build infrastructural stability around your home.
- Aesthetic reasons: retaining walls can also be installed for purely aesthetic reasons such as accentuating tiered landscaping.
- Functionality of an outdoor space: retaining walls can provide extra usable space where you can set up an outdoor table and chair set, a swing or even an additional small garden.
